SUMMARY

Full Stack & Cloud Engineer who builds and runs complete products — backend APIs, web and mobile frontends, and the cloud setup they run on. Shipped platforms used by 50,000+ real users, kept them at 99.99% uptime, and fixed serious security and SEO incidents in production. Also works hands-on with agentic AI (LangChain, CrewAI) and Web3 (Solidity, Hardhat). Oracle Cloud Infrastructure 2025 Certified DevOps Professional.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Solidity, SQL
Backend	NestJS, FastAPI, Node.js, GraphQL, REST APIs, WebSockets, BullMQ
Frontend	Next.js, React, React Native (Expo)
Databases	MongoDB, PostgreSQL, Redis, ChromaDB
Cloud/DevOps	AWS, Azure, Oracle Cloud (OCI), GCP, Docker, GitHub Actions (CI/CD), Nginx, Datadog
AI / Agents	LangChain, LangGraph, CrewAI, RAG, Groq, Gemini, AWS Bedrock, Prompt Engineering
Web3	Solidity 0.8, Hardhat, ethers.js v6, IPFS, smart-contract testing

EXPERIENCE

Softkiwi

Remote

Full Stack & Cloud Engineer

Jan 2025 – Present

- Build and run **SportsX9** (sportsx9.org), the company's real-time sports betting platform — live odds streamed over WebSockets, bet placement, and settlement flows.
- Own the cloud side end to end: Docker-based deployments, CI/CD pipelines with GitHub Actions, Nginx reverse proxy, and monitoring — releases go out with zero downtime.
- Ran a full security review of the login and registration flow: found and fixed **30 issues** across the codebase, including JWT storage, brute-force protection, and OTP exposure.
- Wrote API test suites and testing checklists so new releases don't break existing betting flows.

Carbon Black

Remote

Software Engineer

Jan 2024 – Dec 2024

- Built an environmental impact tracking platform: FastAPI microservices on the backend, React.js / Next.js on the frontend, with PostgreSQL and MongoDB, deployed on AWS.
- Reduced cloud costs by setting up auto-scaling groups and load balancers on Azure and right-sizing the servers the services actually needed.
- Set up CI/CD with Docker and GitHub Actions for faster, safer releases, and built a real-time monitoring dashboard that cut down incident response time.
- Worked on API design, third-party integrations, and internal code-review standards with the team.

PROJECTS

Bwisher Nepal — Fashion E-commerce Platform bwishernepal.com

NestJS, GraphQL, MongoDB, Redis, React Native (Expo), Azure, Docker

- Women's fashion e-commerce platform in Nepal serving **50,000+ users at 99.99% uptime**.

- Built the vendor-pooled order fulfillment system: a clear order state machine, BullMQ/Redis job queues, and workers that can safely retry without double-processing orders.
- Kept APIs fast (about **50ms p95**) using database indexing and Redis caching; integrated payment gateways (Fonepay, NCM) with secure webhooks and shipping APIs (Aramex, NCM).
- Shipped the mobile app with Expo/EAS builds, push notifications, and crash reporting, plus a rewards system — referrals, wallet, scratch cards, and coupons.

SportsX9 — Real-time Betting Platform sportsx9.org

Node.js, WebSockets, MongoDB, Redis, Docker

- Live sports betting product built at Softkiwi: odds update in real time over WebSockets, and bets are placed and settled reliably even under heavy traffic.
- Hardened the platform after a full login/registration security audit and stabilized releases with automated API testing.

ChainResume — Resume Verified on Blockchain github.com/vidyansh07/ChainResume

Solidity 0.8.24, Hardhat, ethers v6, Next.js 14, IPFS

- A resume that can't be faked: the document's keccak256 hash is stored on-chain, and the website recomputes the hash in the reader's own browser — a green "verified" seal appears only if both match.
- Smart contract (no external dependencies, ~7KB) supports credential registration, attestations from whitelisted verifier wallets (like an employer), and permanent public endorsements — all covered by a full Hardhat test suite.

AutoInsight AI — Multi-Agent Research System github.com/vidyansh07

CrewAI, Groq Llama 3.3 70B, ChromaDB, FastAPI, Docker

- Six AI agents (planner, researcher, retriever, analyst, critic, writer) that work together to produce cited research reports automatically — 30 automated tests passing, fully Dockerized.

Flexmonk — SEO & Security Recovery flexmonk.com

Next.js, FastAPI, Google Search Console

- Recovered a coworking marketplace from a spam attack that injected **140,000+ fake URLs**: blocked them with middleware 410 responses, fixed a canonical-tag bug, and ran the Google Search Console cleanup — organic search recovered within weeks.

EDUCATION

Maharishi Markandeshwar University (MMDU)

Bachelor of Technology (B.Tech), Computer Science & Engineering

CERTIFICATIONS & ACHIEVEMENTS

- **Oracle Cloud Infrastructure 2025 Certified DevOps Professional** — Oracle
- **Software Engineer Certification** — HackerRank
- **1st Place**, UPES Dehradun Hackathon 2024
- 80+ public repositories on [GitHub](https://github.com)
